The screenshot displays a Windows 10 desktop environment with three overlapping windows. The background window is the 'System Properties' dialog, specifically the 'Advanced' tab, which shows the 'Performance' section expanded. The 'Environment Variables...' button is visible at the bottom. Overlaid on this is the 'Environment Variables' dialog, showing 'User variables for MALIK' and 'System variables'. The 'Path' variable in the 'System variables' list is selected, and the 'Edit...' button is clicked. This opens the 'Edit environment variable' dialog, which shows a list of paths. The path 'C:\Program Files\Java\jdk1.8.0\_162\bin' is highlighted, and the 'Edit' button is clicked. Finally, the 'Untitled - Notepad' window is open, displaying a list of five steps in Indonesian that guide the user through the process of adding the Java path to the system path.
